Dear Colleagues and Friends,

We are pleased to announce the joint collaboration between EuroMediCom and the Taiwan Dermatological Association (TDA), and the Taiwan Society for Dermatological and Aesthetic Surgery (TSDAS) in organizing the first AMWC Asia TDAC alongside the 6th Taiwan Dermatology Aesthetic Conference, taking place on 4-5-6 May 2018, in Taipei, Taiwan.

A partnership between EuroMediCom and TDA allows the organizers of AMWC Asia TDAC to bring the best speakers from Taiwan, Asia and around the world to share their knowledge and skills.

Moreover, AMWC Asia TDAC is strategically located in Taipei - one of Asia’s most advanced and modern cities, with a thriving aesthetics market. The geographical location allows leverages dynamic growth in both China and Southeast Asia.

AMWC Asia TDAC will be based on top-notch scientific content, including live demonstrations and practical knowledge sharing, that will bring together doctors and aesthetic practitioners from all over Taiwan and the region. AMWC Asia TDAC is poised to become one of the best platforms in Asia for medical aesthetics.

We look forward to seeing you in Taipei.

Overview: This comprehensive full-day workshop will focus on advanced and relevant use of botulinum toxin and dermal fillers utilizing both a didactic and case-demonstration approach for maximum educational impact on learners. Didactic plenary sessions will incorporate the scientific and practical aspects of botulinum toxin and dermal fillers including a safe and effective techniques for advanced application on facial aesthetics.

In this course, a simulation of real clinical situation will be set to allow the learners to observe how international experts (Eastern and Western) apply and integrate their knowledge, skills and critical thinking to analyze, evaluate and treat the patients they meet for the first time.

Mohs micrographic surgery has long been the standard treatment for high-risk non-melanoma skin cancers in North America and Europe. However, it has not been a common practice here in East Asia. Its superiority to wide local excision, higher cure rate with less tissue removed, has been proved by many studies as well as systemic reviews in the literature. In this workshop, participants will practice Mohs surgery and reconstruction with step-by-step guidance on a simulated skin pad.

Overview: After an introduction on main principles of phlebology and sclerotherapy of varicose veins detailed information about sclerotherapy of varicose veins is provided. Participants should be able to: describe the anatomy of venous reflux, identify the advantages and disadvantages of various sclerosing agents and foaming technique, approach to leg veins from spider veins to truncal varicosities, and determine the appropriate use of sclerotherapy, laser, phlebectomy, or endovenous ablation for each patient. Participants will view live demonstrations of patient’s evaluations. Production of sclerosing foam, injection of spider veins and duplex-guided injection techniques will be demonstrated and performed by the participants themselves in a hands on portion with practice pad.
