ORGANIZED IN COOPERATION WITH

Russian State Research Medical University (WSIAM)

and the Department of Anatomy, Embryology & Physiology,
AMC (Amsterdam Medical Center)

The CFA course is officially approved and endorsed by the Netherlands Society of Plastic Surgery, the Netherlands Society of Aesthetic Plastic Surgery and The British Association of Aesthetic Plastic Surgeons

WWW.EUROMEDICOM.COM
EDUCATIONAL OBJECTIVES

- Internationally renowned clinical experts and anatomists will illustrate and teach the pertinent clinical facial anatomy with emphasis on safe and reproducible techniques for the use of injectable fillers and toxins.

- Delegates will be taken through a holistic and extensive insight into the essential anatomy of the human face for safe practice in aesthetic medicine.

- Delegates will get a comprehensive understanding of various anatomical layers and structures within fresh frozen cadaver facial tissue and how facial injections influence volume loss and aging.

- Delegates will get an insight into reading the surface anatomy and real-time application of facial injectables with an emphasis on patient safety and avoidance of structures in critical danger zones of the upper, middle and lower face.

- Delegates will closely work with the experts in employing (advanced) injectable techniques in patients with interactive discussion on the choice and combination of dermal fillers and toxins for each region.

This course is organized in collaboration with the Department of Anatomy, Embryology & Physiology, AMC (Amsterdam)

Russian State Research Medical University (RSMRU) Department of Plastic and Reconstractive Surgery, Cosmetology anwd Cellular Technologies of Pirogov.

Prof. Dr. Natalia MANTUROVA, Plastic Surgeon (Russia)
This "Clinical Facial Anatomy: Dissection & Live Injection Course" is structured and organized based on the SAFE® Concept (Scientific Anatomical Filler Education/Experience).

The SAFE® concept is used to inform and educate our peers to improve safety and efficacy in cosmetic medicine and Aesthetic surgery.

**SCIENTIFIC-BASED**

The course content elucidates the science behind the materials/products used in daily practice, evidence-based information for efficacy, longevity and safety of fillers including bacteriology, antiseptics and biofilm.

**ANATOMY ESSENTIALS**

The anatomical layers are shown in a clear manner including marking and surface anatomy.

These include the most clinically relevant SIX regions (forehead, temple, tear trough, cheek, lips & perioral, jawline & neck).

The location of danger zones, nerves, arteries and important mimetic muscles and their possible variations are delineated.

The synergy between volumisation, use of toxins and fillers will be emphasised.

**FILLER**

Updates on science of dermal fillers and other related techniques will be summarized in a clinically relevant manner ranging from the choice of filler for each area, how to differentiate between different HAs, combination with PRP, EBD (lasers), etc.

Moreover, specific acute and late complications and treatment until dealing with previous "filled" zones will be also covered.

**EDUCATION**

The course covers basic, intermediate and advanced injection techniques on different areas and is tailored for the interests and needs of the delegates. A pre-course questionnaire will be sent to evaluate these requirements.

Other aspects of treatment will be covered such as pain control and patient comfort and dealing with anxiety and difficult patients.
The Anatomy sessions are organized in such a way that 4–5 delegates rotate to instruction stations with 2 instructors per station table with a fresh frozen head specimen.

A layered pre-dissection will be pre-prepared on one half of each cadaver head to facilitate teaching. The participants will objectively learn the essential anatomy relevant to each clinical situation. They will continue to dissect and inject dyed filler material on the other half of the face allowing an understanding of the filler characteristics and tissue interaction.

Each station represents anatomy demonstration of one of the six important anatomical facial regions. An emphasis will be put on an avoidance of complications around facial danger zones: Where, What and How to inject?

The correct use and tissue injection of Hyalase will be demonstrated for the delegates to be optimally prepared for acute situations.

- Central Forehead: M. Frontalis variations: Corrugator complex, nerves & arteries.
- Temple Area: “GunShot” technique for Temple enhancement; Lateral Brow lift.
- Tear trough: Deep or superficial injections and choice of filler.
- Nose: Medical rhinomodulation technique and avoidance of complication
- Cheeks: Superficial & deep fat pads and their relative volume shifts, cheek enhancement.
- Perioral region: Lip and philtrum enhancement, marionette lines, toxins around the mouth.
- Jawline: contouring for bone loss or masculinization.
- Neck & Decollete: The “washout” tightening technique
Participants are assigned into groups of 4-5. The hands-on Live injections on “approximately 20 models” will be organized in different stations. Each station is led by 2 internationally reputed experts who will help the participants to translate the acquired knowledge on facial anatomy into surface anatomy and perform clinical treatments.

Direct observation and interactive discussion with the experts in small group during each session will allow the participants to better understand the treatment and techniques to be employed with a focus on:

- Dermal soft tissue fillers and muscle relaxing toxins as most important means of non-surgical facial rejuvenation.
- The state-of-the-art techniques to be used in each region.
- Live injections aim to cover important surface anatomy and delineate the exact depth and location for optimal aesthetic enhancement and rejuvenation.
- Injection under close supervision of the experts.

TESTIMONIALS

ARJASHA REDDY, AESTHETIC PRACTITIONER, SOUTH AFRICA

This course brings so much value to my practice, in the end my patients benefit the most.

GERDA JAGER, OPHTHALMOLOGIST, THE NETHERLANDS

Difficult to improve. Go on like this. Top faculty, good models on both days and very nice atmosphere. Best course ever for applied anatomy and a very nice atmosphere.

KEVIN MAHARIS, AESTHETIC PRACTITIONER, INDONESIA

I will be more daring in approaching area I would not doing usually. I am more confident now.

PASCALE SCHOPS, AESTHETIC PRACTITIONER, THE NETHERLANDS

This course giving me confidence and enables me to improve my daily practice and patient satisfaction. I truly recommend this course to everyone who is practicing aesthetic medicine.

CATHARINE BARBARA HERINGA, AESTHETIC PRACTITIONER, SWITZERLAND

Speakers really highlight the key issues. I am very happy to have flew to Amsterdam to participate in this course.

SABINE ZENKER (FACULTY), DERMATOLOGIST, GERMANY

One of the most comprehensive teaching sessions I participated in. A course of highest quality, of greatest personal commitment of all, an utmost intense and relevant transfer of knowledge squeezed in into the most effective time frame, a distillate coming out from long-term experience from the medical and the organization team!!

NICOLE, PATIENT, AMSTERDAM, THE NETHERLANDS

In the past, some doctors gave me too much ‘duckface’ and Dr Ali Pirayesh balanced my mouth and he did a very good job, actually it was pointless!

SHISSLAN SAEEM TAH, DERMATOLOGIST, EGYPT

I appreciate sincerely all the effort, the staff, the organization and I have learned so much. I went back to my country with self-confidence and updated skill.

CFA 2014
10-11 October

SPRING SESSION
8-9 May 2015

WINTER SESSION
27-28 Nov. 2015

SPRING SESSION
13-14 May 2016
WHY SHOULD I CHOOSE THIS COURSE?

✓ Learn with over 10 core specialists (dermatology & plastic surgery), international experts in aesthetic medicine (injection techniques), who enjoy sharing their knowledge.

✓ Clinically relevant anatomy and variations:
   - A faculty of core plastic surgeons with special interest in facial surgery with vast experience in instruction of anatomy and or injection techniques
   - Fresh frozen cadaver specimens carefully selected for facial analysis & instruction purpose
   - Small group: 2 instructors and 4-5 participants per head specimen
   - Opportunity to inject real fillers and appreciate different rheology & dissect under supervision
   - Discover the danger zones and practice hylase injection technique to be prepared for emergency situations

✓ Integration of relevant anatomy dissection for aesthetic medicine and live injections:
   - Facial Analysis and Injection on more than 20 models
   - Where, What and How to Inject with safety
   - How to prevent and deal with complications in daily practice
   - Combination therapies with PRP and energy based devices: What, How and When

✓ Pre-course evaluation providing knowledge on participants' needs & background

✓ CFA friends – Facebook Group

TESTIMONIALS

Any physician who regularly injects faces, should attend this excellent quality course without hesitation!

I am very happy that I had the opportunity to get to know the specialists I met at the CFA course in Amsterdam. The course was not just great – it was far more than I expected! It is for everyone who doubts in their work for a specific region and wants to improve their technique in general. I didn't meet just new colleagues at the CFA course - I met new friends. Thank you for the wonderful experience!

Unique course and the Anatomy & Dissection part was excellent! You can see actual fat compartments and can follow the important vessel structures through the tissue layers with a possibility to see fillers being used aesthetically in all areas at the same time.

Incredible course for both the Anatomy Dissection and Live Injection! The course has given me more confidence to provide high quality treatment to my clients from simple to complex procedures.

This course is a must for aesthetic practitioners embarking on their careers. The course is unique with the presentation of live anatomy and it’s variations by experienced practitioners. For more experienced practitioners, it provides review of essential anatomy and review of best injection practices with patients on day 2. Working next to world class injectors is invaluable!

This course is very impressive. I don't think I need anything to add

I find this course perfect for everyone who wants to achieve more experience during injection procedures

I just wanted to say what a pleasure it was to meet you and spend time with you in Amsterdam. I thought the course was great, well organised and had a lovely atmosphere which is unusual in these sorts of courses.

The course is comprehensive and follows the anatomical logic. The demonstrated techniques were safe and the aesthetic results were natural. It was worth to participate.
